Mentee Task 1 Answers

The Maintainers file contains the best practices to follow after making a patch to the repository. It talks about testing that when we make changes we should make these changes available to the community so that they can provide their valuable feedback. The Maintainers file also talks about the whom should we contact regarding a particular driver or security concern and what security concerns should be made publicly available and what concerns should be reported to the security team.

The maintainers list contains the list of the drivers and their respective maintainers, reviewers, mailing lists and status etc.
